Abstract.

In this paper we will investigate the closed form solution of a class of max-type difference equation in the form

$$x_{n+1} = \max\left\{\frac{A}{x_n^k}, x_{n-2}^k\right\}, \quad n \in \mathbb{N}_0$$

where $k \geq 1$, $A \geq 1$ and the initial conditions x_{-2}, x_{-1}, x_0 are positive real numbers. Some other cases are given when $A \leq 0$. The results in this paper generalize some results for Elsayed and Stevic in [7].

Keywords. Difference equation, periodicity, eventually periodic, solutions.

AMS (MOS) subject classification: 39A10, 39A11, 40A05.
